# mnsec2022 app

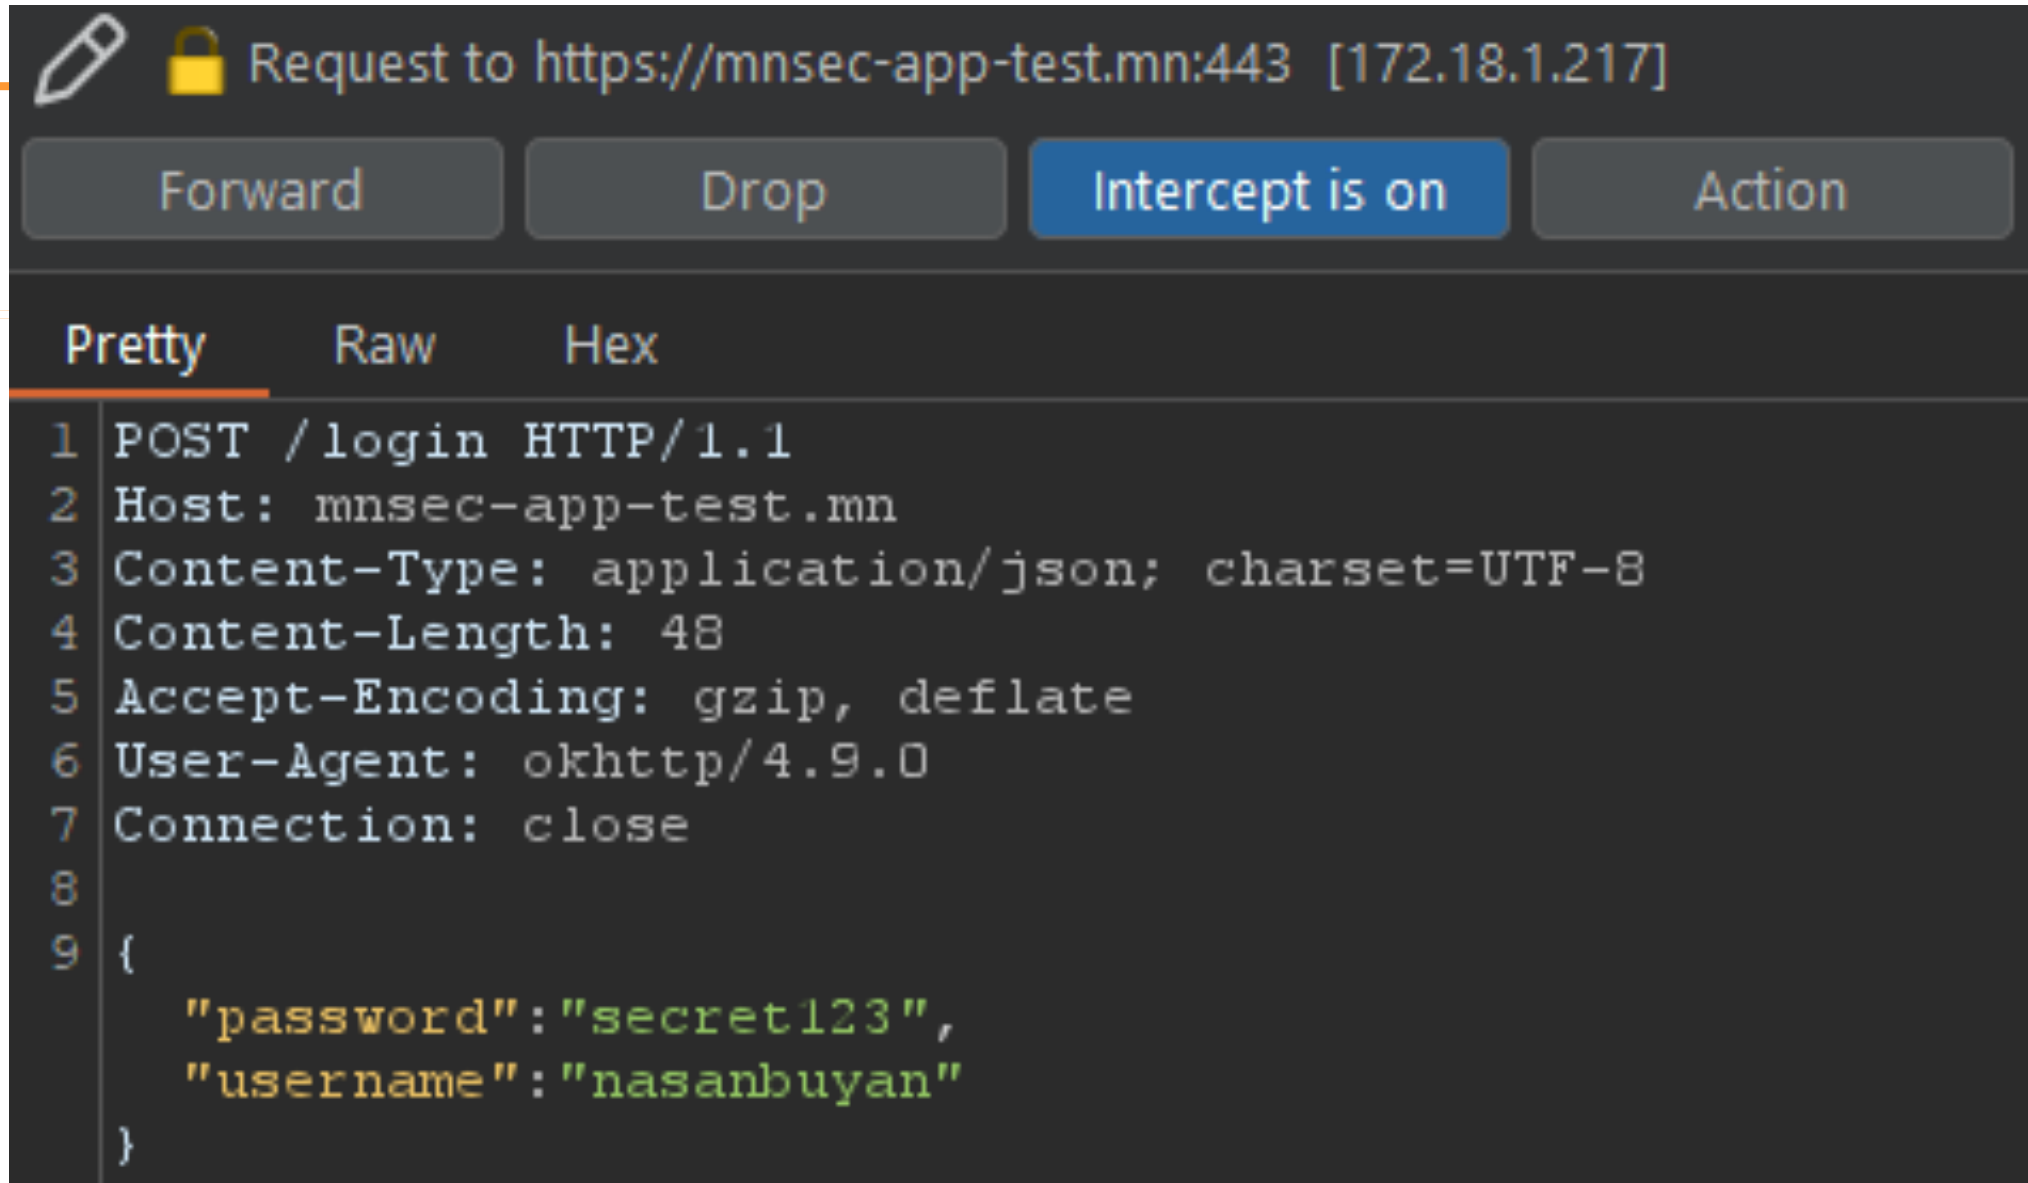

# Network communication

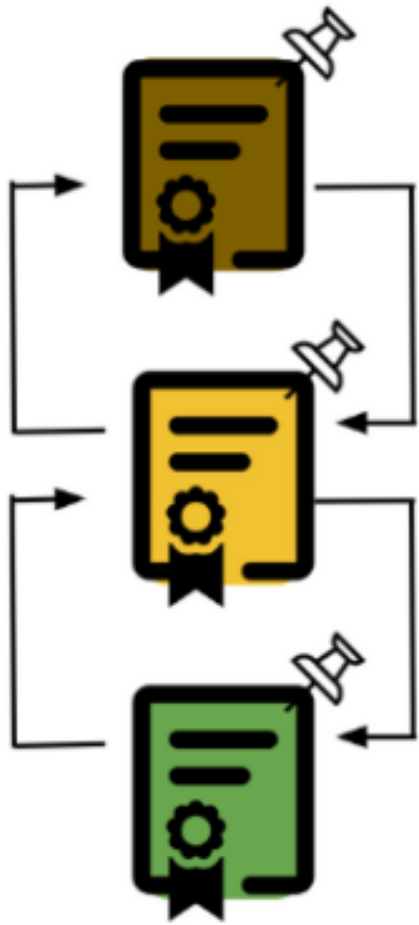

# Network communication - MITM

The screenshot displays a network traffic analysis interface. At the top, a lock icon and a pencil icon are visible next to the text "Request to https://mnsec-app-test.mn:443 [172.18.1.217]". Below this, there are four buttons: "Forward", "Drop", "Intercept is on" (highlighted in blue), and "Action". The main content area is divided into three tabs: "Pretty" (selected), "Raw", and "Hex". The "Pretty" tab shows the following request details:

```
1 POST /login HTTP/1.1
2 Host: mnsec-app-test.mn
3 Content-Type: application/json; charset=UTF-8
4 Content-Length: 48
5 Accept-Encoding: gzip, deflate
6 User-Agent: okhttp/4.9.0
7 Connection: close
8
9 {
  "password": "secret123",
  "username": "nasanbuyan"
}
```

# Network communication – Pinning

## **Pin Certificate Authority (CA) Root**

You only trust anything from this CA - substantially reduces attack surface.

Likely to be very long lived.

But pin may change if you move CA, or they use a new trust root.

## **Pin Intermediate**

Most relevant if you have your own intermediate you sign from.

Allows common pinning, for faster rotated server specific certificates.

## **Pin Leaf**

Specifically your certificate for your endpoint - most secure.

Most subject to rotation though.

Only do this if you're sure public key retained through rotations.

Beware of different certs for different geographic locations.

# Reverse engineering tools detection

Inject frida-agent to memory of app – rooted devices

```
bullhead:/ # cat /proc/18370/maps | grep -i frida
71b6bd6000-71b7d62000 r-xp /data/local/tmp/re.frida.server/frida-agent-64.so
71b7d7f000-71b7e06000 r--p /data/local/tmp/re.frida.server/frida-agent-64.so
71b7e06000-71b7e28000 rw-p /data/local/tmp/re.frida.server/frida-agent-64.so
```

frida-gadget – non rooted devices

```
bullhead:/ # cat /proc/18370/maps | grep -i frida

71b865a000-71b97f1000 r-xp /data/app/sg.vp.owasp_mobile.omtg_android-.../lib/arm64/libfrida-gadget.so
71b9802000-71b988a000 r--p /data/app/sg.vp.owasp_mobile.omtg_android-.../lib/arm64/libfrida-gadget.so
71b988a000-71b98ac000 rw-p /data/app/sg.vp.owasp_mobile.omtg_android-.../lib/arm64/libfrida-gadget.so
```

# Bypassing reverse engineering tools detection

- Checking App signature
- Check the environment for related artifacts
- Checking for open tcp ports
- Checking for ports responding to d-bus auth
- Scanning process memory for known artifacts
